In the article “Evidence from giant-clam $\delta^{18}\text{O}$ of intense El Niño–Southern Oscillation-related variability but reduced frequency 3700 years ago” by Yue Hu et al. (*Clim. Past*, 16, 597–610, 2020), an error in Fig. 4 has been found, the right one should be following:

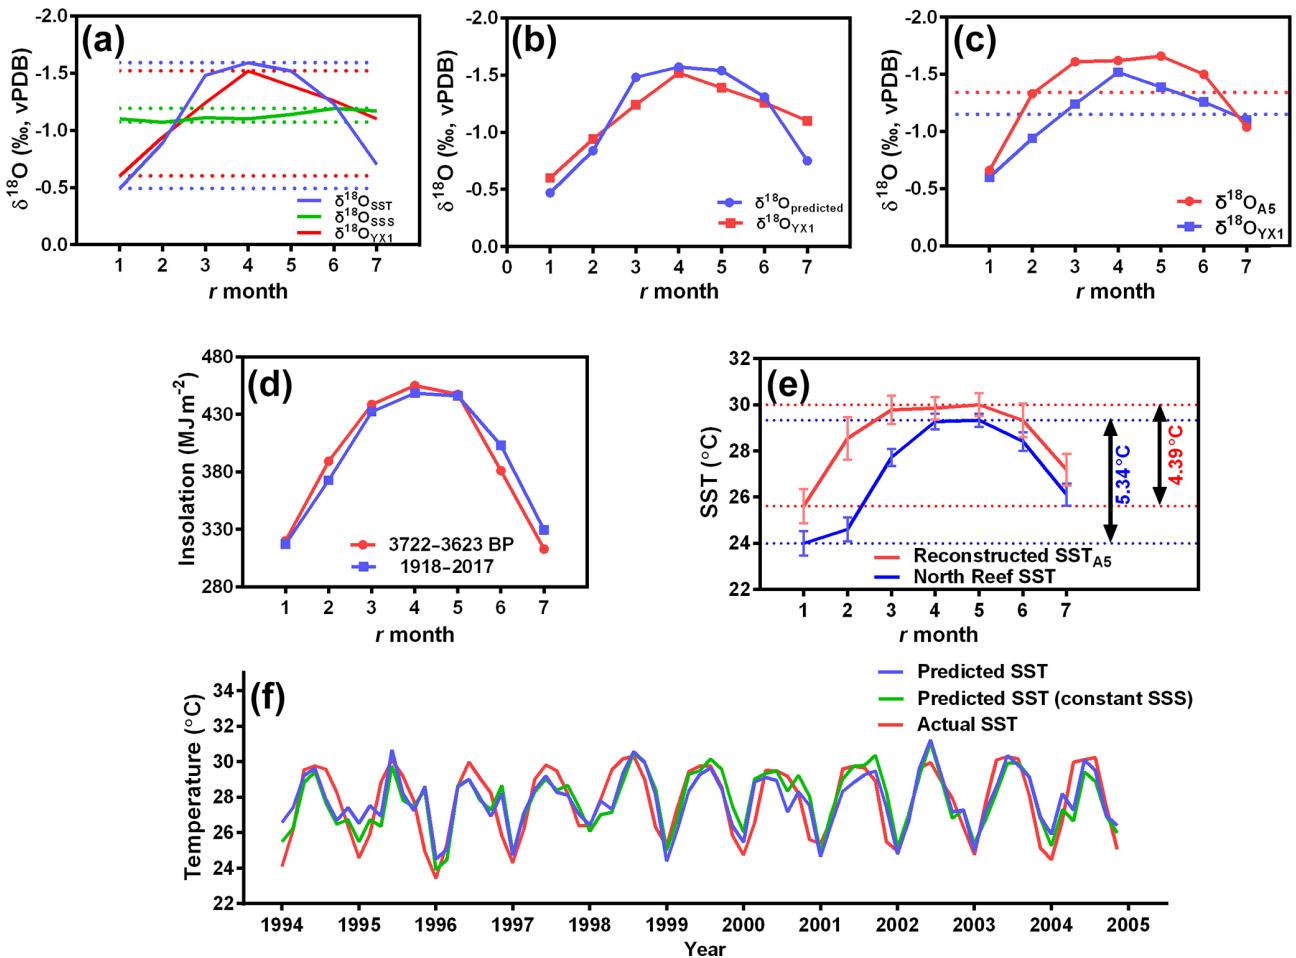

Figure 4. (a) Predicted r -monthly $\delta^{18}\text{O}$ profiles under constant SSS (blue line) and constant SST (green line) conditions, and $\delta^{18}\text{O}$ of YX1 (red line). Dotted lines represent the maximum and minimum of the r -monthly $\delta^{18}\text{O}$ profiles. (b) r -monthly $\delta^{18}\text{O}_{\text{YX1}}$ and $\delta^{18}\text{O}_{\text{predicted}}$. (c) r -monthly $\delta^{18}\text{O}_{\text{YX1}}$ and $\delta^{18}\text{O}_{\text{A5}}$, and the dotted lines represent mean values. (d) Different insolation 3700 years ago and in the past 100 years. (e) Mean seasonal cycles of reconstructed SST_{A5} and North Reef SST. (f) Different SST profiles: predicted SST with varied SSS (blue line), constant SSS (green line), and actual SST (red line), respectively.
