

TT013-MC97

TT013-MC97

Reference: Anderson et al. 2006

Fluxes of lithogenic material (dust) were calculated based on the ²³⁰Th-normalized accumulation rate of ²³²Th, assuming a ²³²Th content of 10 ppm in dust

Age model combines ¹⁴C and oxygen stratigraphic. Age model (¹⁴C part) uncertainties are reported in Anderson et al. 2007 (Marine Chem.). Full age models in Murray et al. 2000 (PO)

Depth Depth intervals given in paper

Age: Assuming age is center. Age is d180

SBMAR: ²³⁰Th

SBMAR err: Assume 5%

EC: ²³²Th-based dust concentration (10 ppm ²³Th in dust; 1/0.242530074 dpm -> ppm)

EC: err
