Dear editor and referees,

Unfortunately, I couldn't implement the supplementary figure within my reply letter to referee #2 (AC C2125). Therefore I hope you will find the graph attached to this writing.

The figure shows the $\text{d}18\text{O}$ variation of each single sample (gray dots) and its respective 200 years smoothed spline (solid colored lines) in order to detect potential systematic $\text{d}18\text{O}$ trends after trees germination (for details please see reply writing: AC C2125).
