I have done the numerical simulation of long distance transport of dust in the period of time from 1993 to 1995 when I was a postdoc researcher, and go to CMOS meeting to give a presentation on long distance transport of dust, at that time few people feel interesting about this issue, because the experts in Canada thought it is too far away for Asia dust to transport to Canada. However, in 1998, when an Asia dust event reached the west coast of north America, people realize that the gap between Asia and north America is not so far. It proves that the experts in Canada were wrong. After I read the abstract of this paper written by Bauer, E. and Ganopolski, I trust their results and support their paper, and think their papers sound good.
