Your paper has now received two expert reviews. Both of the reviewers like the paper and recommend publication after minor revision. They each have some specific technical questions that you will need to answer, especially about the methodology.

You are of course welcome to post responses to the reviewers at any point, but should not prepare a final revised version until the discussion period ends in case there are further comments. However on the basis of the invited reviews, I will certainly invite

C742

you to prepare a revised version, that addresses the reviewer issues, for consideration in CP.
