Dear Thorsten Kiefer,

First of all on behalf of the authors, I would like to thank the reviewers for their invaluable criticism and suggestions. I believe that we have successfully integrated all the reviewers comments and requests, and that these changes have greatly improved the manuscript, as you will be able to appreciate on reading the updated version enclosed here. The additions and changes have been highlighted for convenience.

The text has been modified throughout taking into account the reviewers most important comments, regarding: 1. The interpretation and choice of the proxies, in particular

C1036

the elemental ratios; 2. A reevaluation of the climatic phenomena that potentially affected the Río de la Plata river discharge. In addition figure 4 was removed, while figure 1 was modified, as suggested by the reviewers. We have also responded with an Author Comment to all reviewer comments and suggestions, and have revised and changed the text accordingly.

I look forward to hearing from you and should you have any further queries please do not hesitate to contact me.

Yours sincerely,

Laura Perez
