

Interactive comment on “Quantifying molecular oxygen isotope variations during a Heinrich Stadial” by C. Reutenauer et al.

EW Wolff (Editor)

ew428@cam.ac.uk

Received and published: 21 July 2015

You will see that you already have two substantial reviews, one from a data expert (Jeff Severinghaus), the other from a modeller. Both would like to see your paper published but raise significant issues that you will have to provide responses/author comments to. The discussion remains open for nearly another month (18 August) so you should wait until that is over before you submit a new version but I do expect to encourage you to do that. Meanwhile you are welcome to start responding to the two reviewers with an author comment at any time: the earlier the better if you would appreciate a further round of discussion/clarification with the referees, which may save time and effort at the next stage.
