In my earlier comment i forgot to ask what data will be made avail;able as a supplement to this paper. In other recent papers reviewers seem to have been asking for raw data to be posted so that other readres could, should they wish, independently count layers or compare age models. That would be great as it would alow other automated or manual methods to be applied. But at minimum an Excel file giving a metre by metre depth-age translation is required, so that if the age model changes in future readers can always get back to a depth and do the translation.
