Dear authors,

you can see in the reviewers comments that you paper has been received positively. I think that it is not too complicated to provide a response for each of them.

I have a personal comment on Figure 3. I have some difficulties to accept the idea that anthropisation is inverse to humidity in 3d and related to the ratio Dec Q/ Ev Q, while Fagus/Dec Q is proportional to Humidity. This is really a subjective interpretation and maybe a circular argument. This needs a more quantitative approach or at least a better explanation.

C2146

Best regards

Joel Guiot
