Dear Editor,

We have addressed individual comments raised by the three reviewers on the manuscript (numbered cp-2015-14), and have provided specific responses to each comment indicating the changes made. We are attaching to this response an annotated word document that highlights modifications made in the main body of the manuscript. The file includes the new versions of Figures that were modified according to reviewers' suggestions. We have also enclosed a clean draft of the manuscript should this facilitate reading.

C2579

We have additionally updated the title of the manuscript following reviewers' feedback and we believe now it reflects better the focus of the paper. The paper is now entitled "Millennial-scale vegetation changes in the tropical Andes using ecological grouping and ordination methods". We have also modified the list of authors to include the data contributors of the paper.

We hope you will find the responses sufficient in detail, and we look forward to hearing back from you with your decision.

Best wishes,

Dunia H. Urrego Corresponding author
