Dear authors,

Your manuscript has now completed the discussion phase and received comments from two referees. My impression is that both reviewers very much wanted to be able to give favourable reports on this study, but that there were a very large number of technical problems that prevented them from being able to support publication of your work.

Discussion Paper

At this stage in the process I am undecided on whether this paper has potential to be publishable in *Climate of the Past* after substantial revision. If you feel that you can address the review critiques then I would encourage you to post responses to the reviewer comments as part of the discussion. Please do not prepare a revised manuscript at this stage. I will review your responses to the reviewer comments and then make an assessment of whether I think that there is merit in continuing with the revision and re-review process. If you feel that the reviewer comments can't be satisfactorily addressed by revising the current manuscript and would instead prefer to use the reviewer feedback to guide future work in this area then please also let me know.

Sincerely, Nerilie
