

Interactive comment on “Inter-hemispheric linkages in climate change: paleo-perspectives for future climate change” by J. Shulmeister et al.

J. Shulmeister et al.

Received and published: 18 August 2006

On page S285, I stated that the application of a single confidence level to the whole of the PSD in Figure 9 was inappropriate and that the windows should be analysed separately. This is misleading. The confidence levels calculated DO apply to the whole PSD but for presentation purposes what we will present in the revised paper are confidence levels for the ACR interval.
