

Interactive comment on **“Climate-human-environment interactions: resolving our past” by J. A. Dearing**

J. A. Dearing

Received and published: 30 October 2006

I would like to thank both anonymous referees for their generally positive and insightful comments.

All the referee comments are about the structure, explanation, style and clarity of the paper. There are no comments that dispute the main points presented, and I agree with virtually all their minor suggestions for improving the paper. A revised version that incorporates nearly all the suggestions will be submitted shortly.
