

Interactive comment on “Effect of vegetation on the Late Miocene ocean circulation” by G. Lohmann et al.

G. Lohmann et al.

Received and published: 22 December 2006

We have included all your suggestions into the revised manuscript.

Specific Recommendations: 1. We have included a figure for the change in surface albedo due to the change in vegetation (Fig. 2,3).

2. We have now included the P-E balance in the Atlantic Ocean (Fig. 4). The changed surface winds show the changes in moisture transport (Fig. 5).

3. Figs. 5,6 show now the changes in the wind for the three experiments.
