Dear Nanne et al.,

Thanks for your vastly improved manuscript. All the main points of the reviewers have been responded to very thoroughly in the revised manuscript and a couple of the new analyses have led to some interesting new interpretations of the results. There is, I think, no need to ask the reviewers to re-review the manuscript.

I have sent you a tedious list of comments through the editor’s website, some new, and some relating to the more minor comments of the reviewers. They are, however, all rather minor in nature, requesting improvements to the presentation or slight clarifica-

tion of the arguments, so I see no reason to list them here. The biggest outstanding issue is clarification of the Figures.

You did suggest I might check the English of the paper but there was so much to look through that I did not get round to it. I suggest that you ask one of the native English speaking co-authors to check that aspect of the manuscript before re-submission, since this will increase the chance that your next submission will be the final one!

jules
