

Interactive comment on “Millennial temperature reconstruction intercomparison and evaluation” by M. N. Juckes et al.

H. Goosse (Editor)

hgs@astr.ucl.ac.be

Received and published: 21 September 2007

At the end of the discussion phase, some major revisions were required in the manuscript of Juckes et al. (2007) and an additional evaluation of the revised manuscript submitted to Climate of the Past was thus needed. As this second step of the review process is not public, I considered useful to provide here some additional information. The version submitted in April 2007 was sent to 3 additional reviewers who make comments and suggestions. The authors submitted in July 2007 a revised version taking into account the majority of the reviewers remarks. A few points were however remaining. Some of them have been modified in the version submitted in September 2007. On the other hand, the authors disagree with one reviewer on some points for which no clear consensus could be gained from published literature. The

arguments of the authors appear reasonable from our present knowledge of the field and are presented in a balanced way. As a consequence, I decided to accept the paper for publication in *Climate of the Past*.
