

Interactive comment on “Ice flow modelling at EPICA Dome C and Dome Fuji, East Antarctica” by F. Parrenin et al.

T. van Ommen (Editor)

tas.van.ommen@utas.edu.au

Received and published: 1 May 2007

This paper is well written and makes valuable contributions regarding both the derivation of better ice core chronologies and also to identification of the difficulties and uncertainties inherent in this complex task. Both reviews are supportive and I thank the reviewers for their careful attention.

The authors' responses to review comments are sound and indicate that changes to the manuscript will be made accordingly. Once these revisions are confirmed, this paper will be ready for final publication in CP.
