Received and published: 2 May 2007

The authors have adequately responded to both reviews and revised their ms. accordingly. One of the main concerns, the possible overlap with the Wu et al paper, has been clarified. The revised paper constitutes a short but useful contribution, summarising the progress in model-data comparison over Europe during the LGM. It is in part a review paper, but also contains new results which supplement published work. The paper is acceptable for publication in CP after some minor editorial changes.
