Received and published: 18 July 2007

Dear authors,

I apologize for the long review process of your paper. The two reviewers of your manuscript have highlighted the potential interest of your paper but both of them have requested major revisions before your paper can be considered for publication in Climate of the Past. In particular, you are expected to strengthen the argumentation in support of your interpretation of the data. This should in particular result from the quantitative statistical analysis of back-trajectory cases and from the comparison of MIS5 data with Holocene data. Your interpretation also deserves to build on existing

climate model simulations of the impact of the Laurentide ice sheet on atmospheric flow. I encourage you to take into account the suggestions of the reviewers, to improve the manuscript, and especially the objective interpretation of the data, and to submit a revised version.

Sincerely,

Valérie Masson-Delmotte.
