

Interactive comment on “The southern hemisphere at glacial terminations: insights from the Dome C ice core” by R. Röthlisberger et al.

R. Röthlisberger et al.

Received and published: 10 September 2008

1. Referee 2 asked for more details regarding the drivers for deglacial climate change in section 3.3. We added examples of potential feedback mechanisms in the revised manuscript. However, understanding glacial-interglacial climate change is a matter of ongoing research. It would go beyond the scope of this paper to present hypotheses in more detail.

2. Figure 1 should be larger according to referee 2. We will ask the publishing team to increase the figure size in the final version of the paper.
