

Interactive comment on “Interhemispheric coupling and warm Antarctic interglacials” by P. B. Holden et al.

P. B. Holden et al.

p.b.holden@open.ac.uk

Received and published: 10 March 2010

We are grateful for the reviewer’s comments and will be pleased to incorporate the suggested improvements. In particular, we will provide a more detailed description of GENIE and its modern climate, especially focussing on its shortcomings (or otherwise) for these purposes. We will address all the suggestions, including a discussion of the duration of HadCM3 hosing, shifting the GENIE analysis to focus on East Antarctic temperature change and addressing the behaviour of the transient response (Fig 1c) as the referee has suggested.
