

Interactive comment on “Interhemispheric coupling and warm Antarctic interglacials” by P. B. Holden et al.

V. Masson-Delmotte (Editor)

valerie.masson@cea.fr

Received and published: 10 March 2010

Dear authors,

You have received and answered to the three reviews of your manuscript. While all the reviewers acknowledge the importance of the issue of "warm" interglacials and the novelty of your approach, they however list a number of issues. Two of the three reviewers request major revisions of your manuscript. Please consider carefully all the reviewers' suggestions, in particular regarding 1) the strength and weaknesses of the GENIE model, 2) the set up of the simulations and especially the design of the WAIS sensitivity tests, and 3) the model-data comparison (including specific East Antarctic diagnoses and comparison or discussion of other records). I therefore ask you to send a revised manuscript which will be sent again for review, as well as a detailed answer to each

C1278

of the reviewers' suggestions and comments. Sincerely, Valerie Masson-Delmotte.
