Received and published: 21 January 2009

When reading the fascinating new climate reconstructions from the Med. we tried to verify the the final results starting from the pollen record. In part 3 its says: "Pollen data for the deglaciation section of the core was obtained employing standard methods of pollen extraction, identification and counts reported in Fletcher and Sanchez Gonni (2008). Neither in this paper nor in the 2008 paper the pollen counts are reported. Following the policy of IMAGES, the data should be archived in the projects data repository, but this seems not to be the case. The paper and its findings could be improved, if the primary data would be made available through a public accessible
