

Supplementary Figure

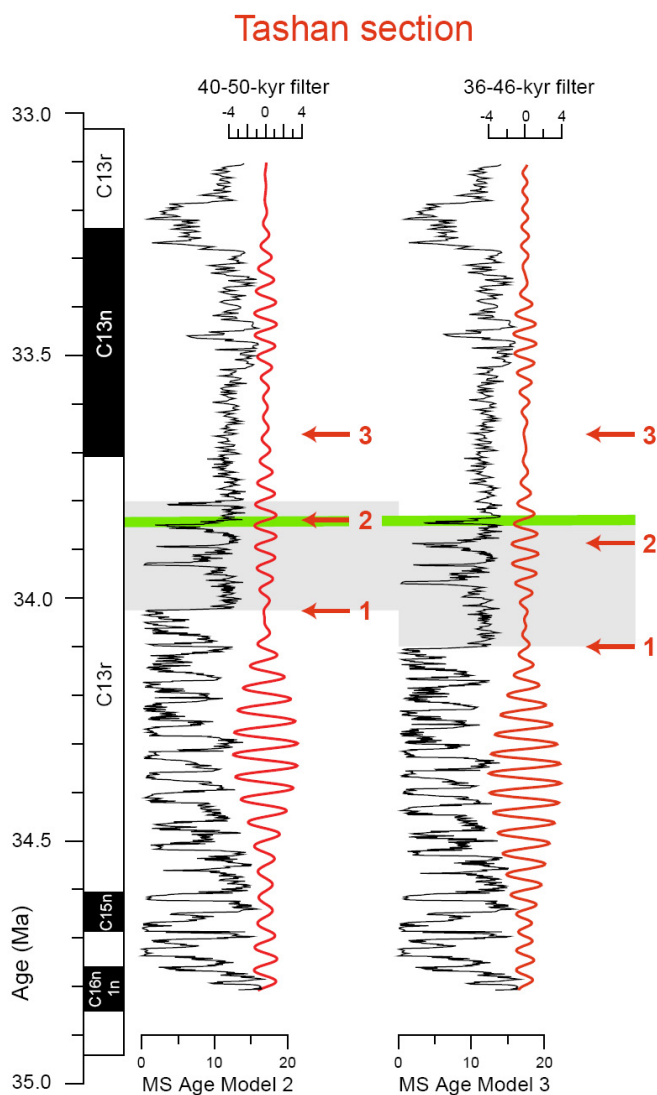

Figure S1. Magnetostratigraphy, median grain size (MGS), redness (a^*), and magnetic susceptibility (MS), and their respective inferred obliquity-cycle bandpass filters of the Tashan section against Age Model 2 (see text for explanation). To the right, arrows indicate the last prominent gypsum bed G7 (arrow 1) and the last regionally correlatable gypsum bed G4 (arrow 2), while the green line indicates the hypothetical position of the Eocene-Oligocene boundary (EOB) relative within C13r.
