Dear Author,

your manuscript has now received two referee reports, which both basically recommend to accept with minor revisions. I urge you to carefully consider their constructive comments, which aim to improve the presentation of your paper. Also, the suggestion of the second referee to show and discuss more of the prescribed atmospheric forcing seems worthwhile to me.

One unsolicited comment came in suggesting an additional proxy dataset for comparison to model results, which might be useful.

Please respond to all three comments within the allotted time.
