

***Interactive comment on “Detecting instabilities in tree-ring proxy calibration” by H. Visser et al.***

**C. Hatté (Editor)**

christine.hatte@lsce.ipsl.fr

Received and published: 26 April 2010

Based on my own reading and on the three reviews, I would accept this paper after minor (to moderate) revisions that would address issues and technical remarks posted by the referees. Please answer to all 3 comments and submit a revised manuscript. all the very best Christine Hatté
