Received and published: 5 May 2011

Thanks to the reviewers for their time and efforts. Independently from the suggestion of the second reviewer, Eric Wolff, I decided to put the relevant parts of this draft into the supplement of the companion paper. Unluckily, I submitted the final and now accepted and printed version of this other paper (<http://www.clim-past.net/7/473/2011/cp-7-473-2011.html>) some hours before I received the final (rather late) review. The content of this second review might therefore not be taken up in all details in this other supplement. This paper will therefore not be followed on any further and I therefore will not respond to all points individually.
