Received and published: 11 June 2010

Dear Authors,

Your paper has been now evaluated by two anonymous referees and has received one scientific comment. I invite you to consider carefully the questions that have been asked and the suggestions that have been made, in particular regarding the availability of the source code, the choice of the data and some elements of the methodology. In addition, one referee has some criticisms about the quality of the presentation. He suggests several modifications and insists on the need to state more clearly the goal of the study and to justify more explicitly the choices taken in your analyses. I think that taking into account those suggestions would help to improve the readability of the text. After the submission of your answers to the Referees' comments, if you can satisfactorily address all comments, I would be happy to consider a revised version for

C300

publication in Climate of the Past.

Thanks again for submitting your work to CPD.

Hugues Goosse
