Dear Dr Dominguez-Castro

Thank you for the replies to both reviewers. I expect now to receive the corrected version of your paper as a submission to Climate of the Past.

I have some points that I would like you clarify:

- 1) what has changed between former and new figure 5? I see some differences in the figure itself, but not in the legend. Moreover I am not convinced by your reply to the request of P. Brohan. I think that a figure with raw data is necessary.
- 2) The remark of reviewer about the maps of Fig.7 remains true. They are just an

C562

example of the coherency of the data, but but they do not confirm anything because they are chosen because these years are particularly coherent. I should see better its place at the beginning of the paper (as a presentation of the data) rather than at the end.

Concerning the remark of C. Ljungqvist asking more reference to the literature, I am convinced by your reply.

Do not forget to send a accompanying letter explaining the changes you have done to the paper.

Best regards J. Guiot
