Dear authors, Four reviewers have provided comments on your manuscript. While they appreciate the originality of your approach and the interest of this manuscript, they raise several precise suggestions for clarifications and improvements. In particular, they ask for an improved description of DO events (see for instance Capron et al, 2010 and references herein for a recent overview), an improved overview of earlier studies, a revised title, an analysis of the differences between sites, and a detailed description of your method. I encourage you to revise your manuscript following the reviewers' suggestions and to provide a detailed answer to their comments. Sincerely, Valerie Masson-Delmotte.
