

Interactive comment on “Water vapour source impacts on oxygen isotope variability in tropical precipitation during Heinrich events” by S. C. Lewis et al.

EW Wolff (Editor)

ewwo@bas.ac.uk

Received and published: 6 April 2010

The paper has now been in discussion for its full period, and has received two anonymous reviews. Both of them are positive and recommend the paper for publication after minor changes. The only significant caveats are about how widely we should interpret the results, given that they come from a short simulation (referee 1) and from only one model (referee 2). The authors are asked to respond with an author comment to each substantive comment from the reviewers, and are then encouraged to submit a new version for CP (using the instructions they receive) that makes minor changes as suggested: this should then be acceptable for CP.
