

Interactive comment on “Climate signatures of grape harvest dates” by M. Krieger et al.

J. Guiot (Editor)

guiot@cerege.fr

Received and published: 16 October 2010

Dear authors,

The three reviewers seem to conclude that the scientific interest of the paper is not high enough, except concerning the correlation between GHD and low-pass filtered winter temperature (rev#1). This agreement between the three reviewers questions me. Then I expect now that you prove the interest of your paper by deeply arguing against their criticisms. Afterwards, we will consider if your paper has sufficiently new matter to be published in CP.

Best regards

J Guiot
