We thank anonymous referee #1 for the positive supporting review.

Regarding the ITCZ northward displacement we fully agree with the referee that that is highly unlikely. We do not infer anywhere that the ITCZ would have moved to this location.

Concerning the sapropel layers, we also agree with the referees comment. We are aware of the deep water originating in the Gulf of Suez and Gulf of Aqaba and we will rephrase the sentence on page 1210 line 10 accordingly.

We will delete the extra “of” in the figure caption of figure 3.
