Received and published: 24 August 2011

We would like to thank both the reviewers for their constructive comments and suggestions. We would be revising the manuscript taking into account the suggestions mentioned by the reviewers. In particular, the seasonality of SWW variability and the driving mechanism shall be further addressed in the revised version. Author #2 has suggested to discuss further about the response of the Southern Ocean to the observed wind trends. We shall try to address this to some extent within the scope of this study. A revised version along with the detailed point-by-point response letter will be followed.
