

***Interactive comment on “Persistent influence of
ice sheet melting on high northern latitude climate
during the early Last Interglacial” by A. Govin et al.***

M. Siddall (Editor)

mark.siddall@bristol.ac.uk

Received and published: 31 October 2011

Dear Aline,

both sets of editor's comments are now in and both are in favour of publication of this paper following minor changes. This is a provisional decision which should be regarded as final in the absence of further comments being added in this period of open discussion.

Both reviewers require more discussion of your methods, in particular concerning age models and your model-data comparison. There are also important technical reservations about your $d_{18}\text{O}$ calculations.

Once these and the other points raised by the reviewers are addressed in full I antici-

C1747

pate that the paper will be acceptable for publication.

Best regards,

Mark
