

Interactive comment on “Continental atmospheric circulation over Europe during the Little Ice Age inferred from grape harvest dates” by P. Yiou et al.

Anonymous Referee #3

Received and published: 23 November 2011

My full review is included the PDF file attached. It is a combination of a WORD file that addresses the COP review categories explicitly, and a copy of the original article PDF with a number of specific comments included using the "sticky notes" function therein.

Please also note the supplement to this comment:
