Received and published: 29 November 2011

It is true that the Law Dome temperatures are miscalculated in this paper, thanks to Mr van Ommen for pointing this out. The calibration of 0.44 permille/K in van Ommen et al. (2004) was misread for 0.44 K/permille. The other temperatures in the tables have been checked again and are correct. Although the results have been slightly changed, the final conclusions remain the same.
