

Interactive comment on “Implications of the permanent El Niño teleconnection “blueprint” for past global and North American hydroclimatology” by A. Goldner et al.

A. Goldner et al.

agoldner@purdue.edu

Received and published: 10 April 2011

The authors agree with the editor comments and will make the changes in the revised manuscript and plan to resubmit the new manuscript within the deadline of April 12th or soon thereafter. The revised manuscript will remove unnecessary figures to help clarify main points and will explicitly describe the motivation for including the high-resolution RegCM3 simulations in the experimental design.
