Received and published: 6 May 2011

Dear Cedric,

Thank you for your review of our paper.

On the subject of the references, here is an update of the status of the submitted papers and a couple of links to where you can find the others. Hopefully these may be useful to the second reviewer and also help answer some of the other questions in your review.

1. Annan and Hargreaves, submitted, 2010b: This is now accepted and published online at Journal of Climate. <http://journals.ametsoc.org/doi/abs/10.1175/2011JCLI3873.1>

C412

2. Yoshimori et al., in revision, 2011 This is, I believe, now very close to acceptance, but if it is not accepted in time I will, as you suggest, reconsider its importance to the paper.

3. Annan et al., 2005b Can be found at http://www.jstage.jst.go.jp/article/sola/1/0/1_181/_article and was cited several times in the IPCC AR4. It is, of course, peer-reviewed. It is published in SOLA the Open Access, journal of the Meteorological Society of Japan (<http://www.jstage.jst.go.jp/browse/sola/>).

4. Hargreaves, 2010 This paper is also peer-reviewed, published in WIREs Climate Change. <http://wires.wiley.com/WileyCDA/WiresJournal/wisId-WCC.html>

I'll gladly send you any of these papers if you have difficulty finding them.

Best wishes,

jules
