

Interactive comment on “The last deglaciation: timing the bipolar seesaw” by J. B. Pedro et al.

J. B. Pedro et al.

jbpedro@utas.edu.au

Received and published: 4 June 2011

A revised manuscript has been submitted to CP that incorporates the reviewers' comments. Key changes in the revised manuscript are:

1. Improvements in our use of the SiZer technique and our description of its limitations.
2. Correction of the Siple Dome record (now using a scaled version of dD).
3. Withdrawal of our previous conclusion of an 'unambiguous lead' of the post-ACR resumption of Antarctic warming over the YD, also necessitating some changes to the relevant parts of the abstract and discussion.

We have submitted a tracked-changes version of the manuscript and a version with all
C728

changes accepted. Some typos in the text and tables have also been corrected.

For full details of how we have addressed all reviewer comments, please refer to our separate responses to both reviews.
