Received and published: 7 March 2012

Dear Benoit,

the discussion period for this paper is still open and so please regard these comments as provisional until the end of the discussion period.

Both reviewers regard the manuscript as being worthy of publication. There are only minor suggestions, the most important of which are the comment on fig.7 by reviewer1 and the issues around discussion of the 17-year spectral signal in the paper by reviewer2. Please make these changes and the other changes recommended in the reviews in any revised version and include full responses to the comments.

C103

Following these minor revisions the paper should be acceptable for publication in *Climates of the Past*.

Best regards,

Mark
