Dear authors,

We have now two reviews of your ms submitted to CPD. The first reviewer has done a careful analysis of your paper and has pointed out important problems related to the correction for CO₂ and the method used for climate reconstruction. I think that they are important and need consideration. Rev#2 agrees with Rev#1 on these points and pointed additional problems as the choice of climatic series. Both reviewers consider

C1130

that your results deserve publication but more work is necessary before it can be done. We expect now that you improve your ms and that you re-submit it with a cover letter explaining the changes you have done and eventually giving your arguments when you disagree with the reviewer.

Best regards

Joel
