Received and published: 3 September 2012

The authors have presented an interesting paper. Referee No 1 suggests minor revisions. Referee No 2 acknowledges that the study by Weldeab et al. is a potentially valuable contribution, but he/she questions the interpretation and requests calibration work to determine the sediment source. Therefore I suggest that the authors revise their paper and carefully respond to the points raised by the referees. The revised paper will be reviewed by referee No 2.
