We thank the Editor, Silvia Frisia, for her valuable comments on our manuscript "Cryogenic cave carbonate – a new tool for estimation of the Last Glacial permafrost depth of the Central Europe". The comments of two referees were very helpful to improve the manuscript, and we have taken into account most recommendations of the two referees as well as the Editor in the revised version of the manuscript. We expanded the paleoclimatic section of the manuscript and included relevant recent literature as suggested by referee 2.
