Received and published: 12 September 2012

Dear Georg and colleagues. There are two interactive comments from referees on submitted manuscript. Both reviewers indicate that data are important but for publication need minor or major corrections. I recommend to you reply to them. I think it will be useful to follow reviewers 2 recommendations and add more sentences on alternative sedimentary models that will improve your manuscript. Please, revise manuscript before production. Best regards, Pavel Minyuk, guest editor of CP
