Received and published: 26 March 2012

It's clear that this paper offers a new, interesting and useful statistical methodology, so I encourage the authors to submit a revised version including the clarifications and improvements suggested by the referees.

I agree that it is sensible to split the paper into two parts, and as a practical way of achieving this I suggest restricting the revised version of this paper to the theory discussion, and subsequently submitting a second paper describing and discussing the pseudoproxy experiment.
