Received and published: 8 October 2012

Dear Aurélien,

both reviewers' comments are encouraging and I hope that this paper is eventually acceptable for publication.

Both reviewers recommend important changes throughout the paper. These are very clearly laid out by each reviewer and so I will not repeat them here. Because the changes are throughout the manuscript and are substantive, they can be regarded as

C1805

'major changes'.

I encourage you to respond to these comments in detail in any revisions and I look forward to the new version.

Kind regards,

Mark
