Received and published: 9 October 2012

Dear Jéna,

both reviewers recommend substantial changes to the manuscript before they can recommend publication. This will likely involve new figures, additions and improvements to all sections (introduction, method, results, discussion and conclusion are criticised in the comments).

However, both reviewers find merit in the paper and so this falls into the category of 'major changes'. I encourage you to submit complete responses to the reviewers comments along with a revised version including the substantial changes recommended by
C1825

each reviewer.

Best regards,

Mark
