Received and published: 6 November 2012

Thank you for submitting your paper to CP, and I apologise that it took me so long to get the full range of reviews I was seeking. You will see that we now have three comments from reviewers, all of whom regard this as a valuable contribution on an important topic; each of them makes several suggestions and comments which call for a moderate revision of your paper. Please respond (as required by CPD) to each reviewer with an author comment, and I invite you to prepare a new version of the paper for CP, taking account of all the comments. Each reviewer raised one or two more general issues about your study and it will be particularly important that you address these: please indicate how you have dealt with each issue when you submit your revision.
