Received and published: 11 November 2012

Dear authors,

As you will have seen, the two anonymous reviews submitted to your manuscript are overall positive, however, they provide a number of - very constructive - comments that need some further work to be addressed.

I recommend that you submit a revised manuscript and explain in detail how you have addressed the reviewer’s comments and suggestions in a statement published in the public discussion.

I'm looking forward to seeing the revisions.

Best regards Martin Melles (Guest Editor)
